EDUCATION

Boise State University, Department of Computer Science

Boise, ID

Bachelor of Science - Computer Science (Expected)

GPA: 4.00 / 4.00

Programming: Intermediate Problem Solving in Java; Intermediate programming in C++; Intro to Python Programming; System Programming in C, Assembly Languages

Algorithms: Data Structure and Algorithms; Design and Analysis of Algorithms

System: Navigate Linux System

Machine Learning: Foundations of Data Science using Jupyter Notebook; Intro to Information Retrieval; Intro to Artificial Intelligence

Software Engineering: Agile Development; Object-Oriented Analysis and Design; Version Control

Computer Engineering: Digital System; Microprocessors

Computing: Intro to Theory of Computation

PROJECTS (<https://github.com/shuai-yang>)

[Search Engine](#)

This is a final project for the Data Structure course. I built a search engine to allow users to search via keyword for entries using the inverted index technique for information retrieval. This project was developed in Java.

[mys command](#)

This is a final project for the System Programming course. I wrote a simplified version of the ps command found on Linux-based systems. The myps tool will extract 7 data points from the stat file and display them to the user by implementing specified command-line options. This project was developed in C.

RESEARCH

Undergraduate Research Assistant

Boise, ID

Boise State University, Computer Science Department

Nominated by Dr. Sole Pera at [PIReT \(People and Information Research Team\)](#) and selected by Higher Education Research Council (HERC) Fellowship to conduct research about the combination of multiple textual representations to improve the accuracy of profiling hate speech spreaders on Twitter. I used Python for this research. Aug 2021-Present

I maintained the code of an open-source C++ library called [IEGenLib](#) (The Inspector/Executor Generator Library), a computation API in the polyhedral compilation framework, to support the compiler project for [ADaPT Research Lab](#). May 2021-Aug 2021
